

User Manual

Android Application
Intranet Redefined

INTRODUCTION

This android application aims at making it easier for the people using android phones to be in touch with the recent updates on various things by using our app Intranet. It has features like time table display, Activities in Campus, connection to moodle server and a few other features.

GETTING STARTED...

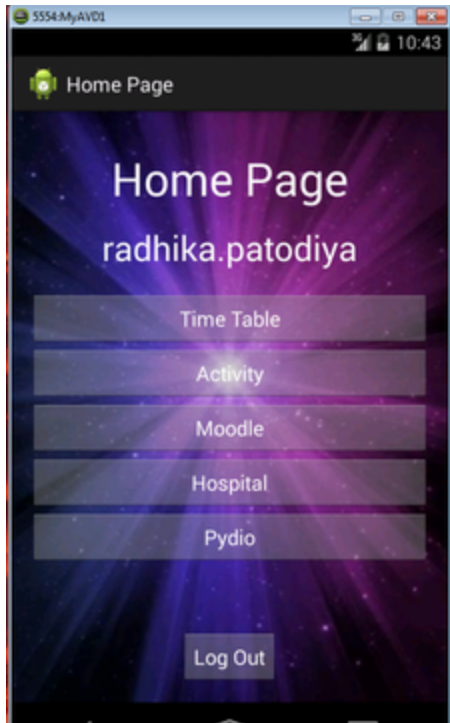

- First of all download the application from play store.
- The user will have to use phpMyAdmin and make the database accordingly to use this software.
- Moodle Mobile app and Pydio app are prerequisites for this application through which we access moodle server.

MORE ABOUT THE SOFTWARE...

- As soon as you start the application the login page opens up. The user has to login using the WEBMAIL ID and PASSWORD.
- The user has maximum 3 attempts to login.

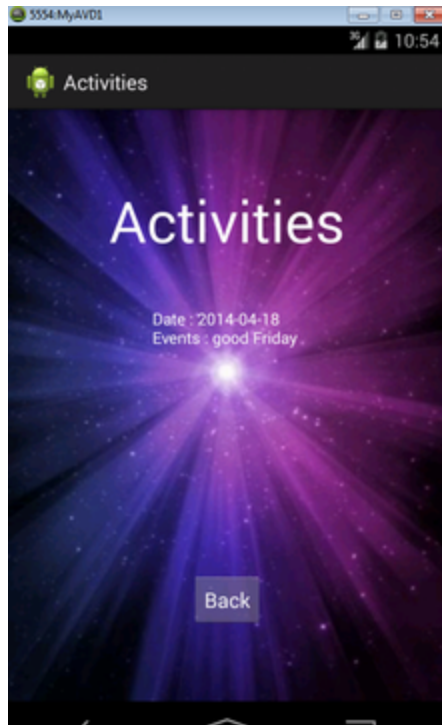

- As soon as you login, you can use various features that are displayed.
- You can see the timetable, select the elective, connect to moodle, connect to pydio, know about the activities and even know about Hospital details.

- The timetable button will open the next page where you can see the timetable displayed according to the chosen day.

- The “Activity” button will display the event details that are supposed to take place.

- The user can go to the main page by using the “Back” button.
- The user can go to the “MOODLE MOBILE” app by clicking the “Moodle” button. Through Moodle mobile app we can go to our intranet redefined website.
- The user can go to the “PYDIO” app by clicking the “Pydio” button.
- The user can see the information regarding hospital by clicking on the “Hospital” button.

HOW TO EXIT..??

Click the “Logout” button and exit the application.
